

A group of friends is going to Paris (1). They want to know where others are, as they know that the city is crowded and they might lose each other. They use city mapper's new "travelling with feature". Luca tells City-mapper he's travelling with the others (2). They get a notification and accept it (3). When using the city map in city mapper, the location of the friends is shown in the map (4). This feature is on for 24 hours (configurable.)
